

Weekly Request Status Report

Operations manager snapshot | 7 October 2026

Purpose. Show the current fictional queue, the records needing follow-up and the data checks required before reporting.

Reporting window. Requests were received 1 September to 6 October 2026. All status and overdue figures use the fixed 7 October 2026 report date.

Queue position. 36 requests: 7 New, 9 In Progress, 6 Blocked and 14 Completed. 22 are open, including 9 overdue and 6 blocked; the groups overlap. 6 open items are High priority.

Records to verify. DS-021 and DS-032 have no owner. DS-033 is Completed without a closed date. DS-034 has a target before receipt and is included in the overdue count. The nine overdue figure is provisional until DS-034 is checked.

Next actions. Assign the two ownerless cases. Review overdue and blocked items with their current owners and record a specific next action. Verify flagged dates and status against the source note before correcting them.

Manager attention. Decide whether to trial a short weekly exception review, name a coordinator for the scenario and agree how revised targets and unresolved blockers would be recorded.

Limits. All requests and roles are synthetic. Targets are planning assumptions, not service commitments. No time saving, resolution benefit or live operational outcome was measured. This PDF is a fixed snapshot.
